## Park purpose

Hays Inlet Conservation Park 2 was formally gazetted as Hays Inlet Environmental Park on 24 July 1992 under the *Land Act 1962*. At that time there was a Trustee Agreement with Redcliffe City Council and the Director of National Park and Wildlife. In 1994 the environmental park was gazetted to Hays Inlet Conservation Park 2 under the *Nature Conservation Act 1992*.

No park specific purpose was identified as part of the gazettal.

## Strategic direction for park management

Based on an evaluation of its natural, cultural and presentation values, Hays Inlet Conservation Park 2 has been assessed as having a basic level of priority for management and will be managed according to this priority rating.

Park management will be based on the best available local knowledge, professional judgement and anecdotal information. The basic level priority means it will receive annual routine inspections with occasional planned visits where issues have been identified. The focus is largely expected to be on natural resource management involving proactive management to understand and protect known natural values.

Cultural values will be managed proactively to protect those values known to Queensland Parks and Wildlife Service, (QPWS). Informal ad-hoc local consultation, collaboration and relationships with First Nations people and stakeholders will be undertaken as required to progress specific issues and programs.

This park currently has low levels of infrequent visitor use and provides a few relatively undeveloped visitor sites. Visitors are unlikely to encounter a ranger on site during their visit. Current and future recreational opportunities will require that visitors have a high level of self-sufficiency and are primarily responsible for their own personal safety.

Informal ad-hoc consultation with community stakeholders will be undertaken on specific issues of park management.

Park assets will consist of minimal robust infrastructure which is required for the protection of natural and cultural values and self-reliant use by the public.

## General park values, uses and management

### Regional ecosystems

Hays Inlet Conservation Park 2 protects five regional ecosystems, two of which have of concern status, Table 1.

### Species of conservation significance

Species of conservation significance observed for this park includes the koala *Phascolarctos cinereus*, marsh sandpiper *Tringa stagnatilis* and sharp-tailed sandpiper *Calidris Acuminata*, Table 2.

### Cultural heritage

All protected areas are recognised as cultural landscapes and First Nations people see themselves as inextricably linked to Country both spiritually and physically. Although cultural records on physical artefacts and sites of spiritual significance are not well documented for this area, all proposed activities need to meet duty of care requirements under the *Aboriginal Cultural Heritage Act 2003*. Non-indigenous historic places will be managed in accordance with the *Queensland Heritage Act 1992*.

### Marine protected areas

Hays Inlet Conservation Park 2 is located within the Marine National Park zone MPZ11 of the Moreton Bay Marine Park. Activities must be consistent with the objectives of this zone. Any person wishing to conduct activities in these zones must comply with the *Marine Parks Act 2004*.

Hays Inlet Conservation Park 2 is adjacent to the Hay's Inlet declared Fish Habitat Area (FHA) management A area, which significantly constrains development activities. This declaration under the *Fisheries Act 1994* requires that activities on the conservation park must consider potential impacts on the adjoining FHA.

Hays Inlet Conservation Park 2 is adjacent to and parts of the park are within the Moreton Bay Ramsar area declared on 22 October 1993.

## Priorities for park management

The two regional ecosystems and three conservation significant animal species are the main values of this park. The priorities for park management will be to mitigate any threats to these values through fire and pest management.

Management actions will be undertaken which aim to ensure:

- life and property on and adjacent to the park is protected
- fire is managed to conserve or maintain the condition of the regional ecosystems through the application of planned burn guidelines
- the impacts of existing pest species on neighbouring land uses are mitigated
- pest threats are managed to conserve or maintain the condition of these regional ecosystems and the koala species
- consideration of the neighbouring FHA is undertaken during fire or pest management activities on the park.

## Appendix

### Conservation values management

**Table 1: Endangered and of concern regional ecosystems**

| Regional ecosystem number | Description                                                                                                                                       | Biodiversity status |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 12.1.1                    | <i>Casuarina glauca</i> woodland on margins of marine clay plains.                                                                                | Of concern          |
| 12.3.11                   | <i>Eucalyptus tereticornis</i> +/- <i>Eucalyptus siderophloia</i> , <i>Corymbia intermedia</i> open forest on alluvial plains usually near coast. | Of concern          |
